

Growing Engineering Consulting business in Burlington, Ontario with evolving market clients across Canada requires the following:

### **CAD Detailer Sub-contractor** (occasional services as required)

**Primary:**

Shop Drawings for Building Cladding/Flashing, Deck, Miscellaneous Steel, Details, Air/Vapour/Thermal Retarders, Quantity Take-off and Cut Lists

**Secondary:**

Structural Engineering General Arrangement and Details for steel (mostly), wood (some residential), concrete and masonry.

**Software capability:**

AutoCAD or TurboCAD, Excel, Word, Sketchup, PDF editing (adding comments, stamps, importing to CAD)

We require occasional services by a sub-contract detailing services person/business who will be able to support our engineering work and “fill in the gaps” with knowledge of standard construction procedures and detailing practices. We anticipate that a person with 5 years practical experience in a supervised environment will be capable of fulfilling our requirements. This work is not appropriate for a recent college graduate without prior experience.

If you are set up to operate off-site from our office you must have a licensed CAD installation.

We use TurboCad software in-house, which can import/export DWG and DXF. We can provide an in-house work-station with TurboCAD software if you do not have an installation with which to work independently. There is a short learning curve between AutoCAD and TurboCAD which we can accommodate, but there is limited third-party support. It is capable of the flat drawings that we require.

An Ontario MMAH BCIN registration for House or Small Buildings would be useful.

Send an email describing your capability to [President@SteelBuildingExperts.ca](mailto:President@SteelBuildingExperts.ca) or call (905) 617-2729.
